The Mini Microphone 2+ optimizes signal-to-noise ratio in one-to-one communication. It sends the speaker's voice directly to the recipient's sound processors without the need for any extra devices. The Mini Microphone 2+ is reliable and improves speech understanding in difficult listening situations where distance, background noise or poor acoustics are an issue. This may help to allow the listener to perform dual attention tasks that people with normal hearing may take for granted.

In essence the microphone is designed to extend the hearing range of the sound processor in a variety of situations, such as:

- when having conversations at home
- in the car
- while dining out.

The microphone also functions as a portable audio streaming device. Via the line-in input, your patient can connect to virtually any audio source, e.g. music player, PC, phone, or even TV to stream audio directly to the sound processors. It is ideal for situations such as:

- listening to a music player while exercising
- using other communication tools such as Skype and Facetime
- while traveling
- in place of worship
- in school, at a lecture

**Easy to connect**

- Just press the pairing button on the Mini Microphone 2+ and turn on the sound processor within 20 seconds and it automatically pairs with the sound processor.
- Pairing with a Cochlear™ Baha® Sound Processor can also be done through the fitting software.
- Once paired the microphone will stay paired with the sound processor.

**Easy to use**

- Simply turn the microphone on and switch the sound processor into streaming mode.
- Easy to recharge using the included charger.
- Battery life:
  - Microphone mode: Typically 11 hours
  - Line-in mode: Typically 11 hours
  - FM mode: Typically 10 hours
  - Telecoil mode: Typically 7 hours
- When worn vertically (clipped on or worn on lanyard) the microphone automatically switches into directional mode and minimizes background noise.
- When placed horizontally on e.g. a table the microphone automatically switches into omni-directional mode picking up the voices of multiple speakers.
- Plug-and-play line-in and FM functionality.
- Volume control buttons for easy adjustment (incl. volume control lock) and mute button.
- Drop detector – mutes transmitted signal momentarily when dropped from heights above 30 inches.

**Volume setting range**

The Mini Microphone has a total volume range from -24 dB to +12 dB in 3 dB increments (12 incremental steps total). The default setting is 0 dB, meaning the sound signal is transmitted to the processors without any additional amplification.

**2.4 GHz wireless technology**

- A smart, robust and reliable standard with a strong, clear and stable signal.
- No need to wear an intermediary device, as the signal is transmitted directly to the sound processor.

---

**DATASHEET**

**Cochlear™ Wireless Mini Microphone 2+**

The Cochlear™ Wireless Mini Microphone 2+ transmits speech and audio directly to Nucleus™ and Baha® sound processors from a range of up to 82 feet.*

**Features:**

- Table microphone functionality
- Telecoil functionality
- FM functionality (Europin FM receiver required)
- Plug-and-play line-in mini-jack connector
- 82 foot range with clear line of sight
