You can also choose a Cochlear™ Nucleus® CR210 Remote Control or CR230 Remote Assistant to control your processor. The remotes let you control one or two processors at a time and can provide extra troubleshooting functions. For more about remotes, please consult your remote user guide.

People with certain types of hearing loss can wear the processor in Hybrid mode by adding an acoustic component. The acoustic component sends amplified acoustic sound into the ear canal.

A number of tools and accessories are supplied with your sound processor.

Warning

Rechargeable batteries

In certain circumstances, rechargeable batteries can become VERY HOT, and could cause injury. Remove your processor immediately if it becomes unusually warm or hot, and seek advice from your clinician. Parents and caregivers should touch their child’s or recipient’s processor to check for heat if the child or recipient is showing signs of discomfort. Rechargeable batteries should NEVER be worn beneath clothing (including scarves and headwear covering the ears). The rechargeable battery should not be used by patients who cannot remove the device by themselves, or notify a caregiver that the device has become hot.

Note

Important information or advice.
Charging

Batteries

You have a choice of three battery types with the CP900 series processors:

- The Cochlear™ Nucleus® CP900 Series Standard Rechargeable Battery Module.
- The Cochlear™ Nucleus® CP900 Series Compact Rechargeable Battery Module.
- The Cochlear™ Nucleus® CP900 Series Standard Tamper Resistant Battery Module, which uses two disposable batteries and has a tamper resistant lock.

Battery life

Batteries should be replaced as needed just as you would with any other electronic device. Battery life varies according to the programs used each day, the thickness of skin covering your implant, and the size and type of battery.

The rechargeable battery’s lifespan is at least 365 charge cycles. A completely empty rechargeable battery will take approximately four hours to recharge.

Rechargeable batteries may take longer to fully recharge with age. To get the longest life from the rechargeable batteries, always recharge before use.
Replace the battery
Remove the battery

1. Twist the battery module as shown to remove it from the processing unit.

Attach the battery

1. Align the battery module to the processor socket to fit the parts together.

2. Twist the battery module as shown to attach the parts. The processor will turn on automatically.

Charge rechargeable battery modules

1. Angle and fit the rechargeable battery module into a socket on the Cochlear™ Nucleus® Battery Charger.

2. Twist clockwise to connect.

3. Connect the battery charger to the power adaptor and plug into mains power.

**MAINS POWER LIGHT**

Materials

- Processing unit: copolyester
- Battery modules (all types) are made of copolyester.
- Coil is made of polypropylene (PP), thermoplastic elastomer (TPE).
- Coil magnet casing is made of acrylonitrile butadiene styrene (ABS).
- Coil cable sheath is made of polyvinyl chloride (PVC).
- Coil cable plugs are made of PP & TPE.
- Processor covers are made of polystyrene and polycarbonate.
- Coil covers are made of polycarbonate.
- Hybrid materials for outer sheathing of the housing adaptor and the outer cable sheathing is made of polyamide.
- Custom earmoulds are made of Stereo Lithography Acrylic covered with a UV-cured lacquer.
- Plus Domes are made of elastosil silicone polymer.
- Power Domes are made of TPE.

Battery life, charge cycles and lifespan

- Battery life means the time a device will run before the disposable batteries must be replaced, or the rechargeable batteries recharged.
- Battery charge cycle is a full charge and discharge of the rechargeable battery.
- Battery lifespan means the total number of charge cycles a rechargeable battery will last before the battery life degrades to 80% of its original fully-charged capacity.
